Note: Within nine months from the publication of the mention of the grant of the European patent, any person may give notice to the European Patent Office of opposition to the European patent granted. Notice of opposition shall be filed in a written reasoned statement. It shall not be deemed to have been filed until the opposition fee has been paid. (Art. 99(1) European Patent Convention).

Description

Technical Field:

[0001] The present invention relates to pharmaceutical amide derivatives or salts thereof and to therapeutic agents for diabetes mellitus containing them as effective components.

Background of the Invention:

[0002] Diabetes melitus is a disease accompanied by a continuous hyperglycemic state and is said to be caused by action of many environmental and genetic factors. The main controlling factor for blood sugar is insulin, and it has been known that hyperglycemia is caused by deficiency of insulin or by excess of factors which inhibit its action (such as genetic cause, lack of exercise, obesity and stress).

[0003] Diabetes mellitus is classified mainly into insulin-dependent diabetes mellitus (IDDM, caused by lowering of insulin-secreting pancieses function due to autoimmune diseasee) and non-insulin-dependent diabetes mellitus (NID-DM, caused by lowering of Insulin-secreting pancieses function due to pancreatic fattigue accompanied by continuous high insulin secretion); 95% or more of diabetic patients in Japan are said to suffer from NIDDM, and an increase in patients due to change in daily file style is becoming a problem.

[0004] For therapy of diabetes mellitus, dietetic treatment, therapeutic exercise and treatment of obesity are mainly conducted in mild cases while, when the disease progresses, oral antidabetic drugs (for example, insulin secretion promoters such as sulfonytures compounds and insulin sensitivity potentiators) are administered. In severe cases, an insulin preparation is administered. However, there has been a brisk demand for creation of drugs whereby higher control of blood sugar is possible, and development of antidiabetic drugs having a new mechanism and high usefulness has been demanded.

[0005] U.S. Patents 4,396,827 and 4,476,849 describe phenyl-ethanolamine derivatives useful as drugs for obesity and for hyperglycemia. Action of those compounds is reported to be due to a stimulating action to \$\tilde{\beta}_1\coperations\$, it is known that \$\tilde{\beta}_2\coperations\$ are classified into \$\tilde{\beta}_1\coperations\$, as useful subtypes, that stimulation of \$\tilde{\beta}_1\coperations are classified into \$\tilde{\beta}_1\coperations\$, as usually subtypes, that stimulation of \$\tilde{\beta}_2\coperations are classified into \$\tilde{\beta}_1\coperations\$, as the stimulation of \$\tilde{\beta}_2\coperations are classified into \$\tilde{\beta}_1\coperations are classified in \$\tilde{\beta}_2\coperations are classified in \$\tilde{\beta}_2\coperations are classified in \$\tilde{\beta}_1\coperations are classified in \$\tilde{\beta}_2\coperations are classified in \$\tilde{\beta}_1\coperations are classified in \$\tilde{\beta}_2\coperations ar

[0006] However, those β_2 -agonists also have actions caused by stimulation of β_1 - and β_2 -receptors such as increase in heart rate and muscular tremor, and they have a problem in terms of side effects.

[0007] Recently, It was ascertained that β-receptors differ amongst species, and it has been reported that even o compounds confirmed to have a β-receptor selectivity in rodential animals such as rats show stimulating action 10 β-1 and β-receptors in human beings. In view of this, investigations for compounds having a stimulating action which is selective to β-receptor in humans have been conducted recently using human cells or cells where human receptors are expressed. WO 95/23153 describes substituted sultonamide deviatatives of formula. A below which, due to their selective stimulating action to β-preceptor is human beings, are useful against obsetly, hypertyle-emia etc. - but does not specifically disclose insultin accretion promoting and insulfia resettivity potentiating actions of those compounds.

$$(R^1)_n \stackrel{QH}{\longleftarrow} \stackrel{H}{\longleftarrow} \stackrel{H}{\longleftarrow} \stackrel{R^2}{\longleftarrow} \stackrel{R^4}{\longleftarrow} \stackrel{N-SO_2(CH_2)_r}{\longleftarrow} \stackrel{R^7}{\longleftarrow} \stackrel{(A)}{\longleftarrow}$$

[0008] In formula A the symbols are as defined in WO95/29159.

[0009] There has thus been demand for creation of therapeutic agents for diabetes mellitus of a new type which have high clinical usefulness.

55 Disclosure of the Invention:

[0010] The present inventors have conducted intensive investigation on compounds having both insulin secretion promoting and insulin sensitivity potentialing actions and found novel amide derivatives that show both good insulin

secretion promoting action and good insulin sensitivity potentiating action and furthermore show selective stimulating action to β_3 -receptors.

[0011] The present invention provides amide derivatives of formula (I) below, and salts thereof, that are useful for the therapy of diabetes mellitus, having both insulin secretion promoting

and insulin sensitivity potentiating actions and further having anti-obesity and anti-hyperlipemia actions due to selective stimulating action to β_3 -receptors. It also provides pharmaceutical compositions containing these compounds as effective ingredients, and the use of these compounds for preparation of medicaments for treating diabetes meilitus. In the compounds of formula (i)

$$\mathbb{R}^2 = \mathbb{R}^{10} \mathbb{R}^{10} \mathbb{R}^{10} \mathbb{R}^{10}$$
 (1)

ring B is a heteroaryl group which may be substituted and may be fused and which is as defined below;

X is a bond; lower alkylene or alkenylene which may be substituted with hydroxy or a lower alkyl group; carbonyl; or -NH; with the proviso that when X is a lower alkylene group which may be substituted with a lower alkyl group, the hydrogen atoms bonded to the carbon atom constituting the ring B may form a lower alkylene group together with the lower alkyl group so that a ring is formed;

A is methylene, ethylene or -CH₂-O-;

R1a and R1b are the same or different and selected from H and lower alkyl groups;

R² is H or halogen; and Z is N or ≃CH-.

10

15

where ring B is a heteroaryl group, X is a bond or a lower alkylene group, and R is H or halogen or a lower alkyl, amino, benzyl or halogenobenzyl group.

[0013] The term "lower" herein means a linear or branched hydrocarbon chain having up to 6 carbon atoms unless otherwise specified.

[0014] Specific examples of the "lower allyl group" are methyl, ethyl, and linear or branched propyl, bulyl, pentyl and heavyl, preferably an allyl having from 1 to 4 carbon atoms, particularly preferably methyl, ethyl, propyl and isopropyl. [0015] A "lower allyling group" is a divisient group behained by removing an arbitrary hydrogen atom from the above "lower allyl group"; preferred are allylene groups having from 1 to 4 carbon atoms, particularly methylene, ethylene, propylene and bulylene. Examples of the "lower allewinge groups" are virylinene, propylene, butterylene, penthylene.

and hexenylene groups.

[0016] Specific examples of ring B when it is a heteroaryl group fused with a benzene ring, or is a monocyclic or bloydle heteroaryl group, are quinolyl, isoquinolyl, quinoldinyl, quinoxalinyl, quinoldinyl, perzimidazoyl, indidazopyl, penzimidazoyl, middazopylidyl, penzimidazoyl, dischiazobyl, sobriazobyl, penzimidazoyl, tilazoyly, pyrazoyl, isobriazoyl, sobriazoyl, pyrnolyl, middazoyl, tilazoyly, pyrazoyl, isobriazoyl, pyrnolyl, pyrindiyl, pyridazinyl, pyrazinyl, thiadazoyl, triazoyl, tetrazoyl, neathtryiridiny and pyridopyrimidind croups,

[0017] Preferred examples of substituent for the heteroary group which may be fused with a benzenering are halogen and lower alkyl, lower alkenyl, lower alkenyl, lower alkenyl, lower alkyl-Co-, lower alkyl-Co-, lower alkyl-Co-, lower alkyl-Co-, lower alkyl-Co-, lower alkyl-Co-, lower alkyl-Co-), low

alkyl-SO₂-NH-, lower alkyl-NH- and di-lower alkyl-Ng-quips.

[0018] These substituents may further be substituted with an aryl or heteroaryl group, halogen or a hydroxy, sulfaryl,

halogeno lower alkyl, lower alkyl-O., lower alkyl-S., lower alkyl-C.C.D., carboxy, sulfonyl, sulfinyl, lower alkyl-S.O., lower alkyl-S.O., lower alkyl-S.O., lower alkyl-S.O., lower alkyl-S.O., alkower alkyl-Ne-C.D., di-lower alkyl-N.C.O., nitro, cyano, amino, guandino, lower alkyl-N.C.O., https://disch.c.d.k.d., lower alkyl-N.C.D., lower alkyl-N.C., lower alkyl-N.C., lower alkyl-N.C.D., lower alkyl-N.C., lower alkyl-S.O., lower alkyl-N.C., lower alkyl-N.C.,

[0019] The "lower alkenyl group" is a linear or branched alkenyl group having 2 to 6 carbon atoms, and specific examples are vinyl, propenyl, butenyl, pentenyl and hexenyl groups.

[0020] The "lower alkynyl group" is a linear or branched alkynyl group having 2 to 6 carbon atoms, and specific examples are ethynyl, propynyl, butynyl, pentynyl and hexynyl.

[0021] The "halogen" means a fluorine, chlorine, bromine or lodine atom, and the "halogeno lower allyl group" means a group where an arbitrary hydrogen atom or atoms in the above allyl group is/are substituted with a halogen atom or atoms.

[0022] When X is a bond, the carbon atom of the -CO- group is directly bonded to the ring B.

[0023] Each compound of the present invention has at least one asymmetric carbon atom and therefore there are optical isomers such as (A) compounds (S) compounds de., racemates, disasteremers, etc. The present invention includes all and each of the slotaled isomers and mixtures thereof. It also includes hydrates, solvates (such as those with ethanol) and polymorphic substances of derivative (I).

[0024] Derivative (i) of the present invention may form salts with acids - e.g. addition salts with mineral acids such as hydrochicir, bydrochronic, hydrochoc, sulturio, nibte and phespohine acids set, and with organic acids such as formic, acetic, proplanic, oxalic, melonic, succinic, furnaric, maleic, lactic, malic, chiric, tartaric, cathonic, botter, metianesuffonic, tarkanesuffonic and obtamine acids a

Manufacturing Method

45

50

55

[0025] The compound of the present invention may be manufactured by, various synthetic methods utilizing the characteristics of its fundamental skeleton and the type of any substituent(s). Representative methods are illustrated hereunder.

First Manufacturing Method:

[0026]

20

25

OH R^a

R^{1a} R^{1b}

NH₂

(II)

NH₂

OH H N A O OH H N A O OH H N A OH R A OH H N A OH H

[0027] In the formulae, R1a, R1b, R2, A, B, X and Z are as defined already; Ra is a protective group for amino; and Y1 is a leaving group, more specifically hydroxy, lower alkoxy or halide.

[0028] In this method, compounds (ii) and (iii) are subjected to amidation, and the protective group is then removed to synthesize compound (i).

[0029] The amidation can be conducted in customary manner.

[0030] The solvent may vary depending upon Y¹ of compound (III) and mostly an inert solvent or an alcoholic solvent (such as isopropanol etc.) may be applied.

[0031] When Y' is a hydroxy group, the reaction may be conducted in the above solvent in the presence of a condensing agent, examples of which are N,N'-dicyclohexylcarbodimide (DCC), 1-ethyl-3-(3-dimethylaminopropyl)carbodimide (EDC), 1,1'-carbonyldimidezole (CDI), diphenylphosphoryl azide (DPPA), diethylphosphoryl cyanide (DEPC) etc.

40 [0032] When Y¹ is lower alkoxy, the reaction may be conducted under heating or reflux as it is or in the above inert solvent.

[0033] When Y1 is hallde, the reaction may be conducted in the above inert solvent in the presence of a base.

[0034] Examples of the Inert solvent are dimethylformamide (DMF), dimethylacetamide, tetrachioroethane, dichloromethane, dichloroethane, chloroform, carbon tetrachiorde, letrahydrofuran, dioxane, dimethoxyothane, ethyl acetate, bearene, foluene, xylene, acatonistrile, dimethyl sulfoxide etc., and mixtures thereof, and it may be appropriately selected depending upon reaction conditions. Examples of the base are inorganic bases such as sodium and potassium hydroxide and carbonate etc. and organic bases such as N-methylmorpholine, triethylamine, disopropylethylamine, pylidine etc.

[0035] The protactive group R* is one commonly used for amino by those skilled in the art, and representative exto amples are acyl such as formyl, acetyl, propionyl, methoxyscestyl, methoxypropionyl, benzoyl, thiarphylacetyl, floracylacetyl, floracylacetyl, terrosyldezoyld, storelydbyoxylor stell, ower alkoxycarbonyl such as methoxycarbonyl, end-butoxycarbonyl etc.; arelatyloxy-carbonyl such as benzyloxycarbonyl, benzyloxydbyoxy-carbonyl such as benzyloxycarbonyl, benzyloxydbyoxy-carbonyl, benzyloxydbyoxy-carbonyl, benzyloxydbyoxy-carbonyl, benzyloxydbyoxy-carbonyl, benzyloxydbyoxy-carbonyl, benzyloxydbyoxy-carbonyl, benzyloxydbyoxy-carbonyl such as timethylisyll etc.; arelatyloxy-carbonyl such as timethylisyll

5 [0036] Removal of the protective group may be conducted in customary manner. For example, R^a may be easily removed

i) when it is benzhydryl, p-methoxybenzyl, trityl, tert-butoxycarbonyl, formyl etc., by treatment with an acid such

as formic or trifluoroacetic acid or a trifluoroacetic acid-anisole, hydrobromic acid-acetic acid or hydrochloric aciddioxane mixed solution etc;

ii) when it is benzyl, p-nirobenzyl, benzhydryl, trityl etc., by catalytic reduction using palladium-carbon or palladium hydroxide-carbon; and iii) when it is tri-(bower alky)sibly or the like, by treatment with water, fiboride anion (e.g. tetra-n-bulylammonlum fluoride, sodium fluoride, postassium fluoride, hydrofluoria acid) etc.

Second Manufacturing Method:

[0038] In the formulae, R1a, R1b, R2, A, B, X and Z are as defined already.

[0039] In this method, compound (IV) is reacted with compound (V) to give compound (I).

[0040] Compounds (IV) and (V) are reacted under heating or reflux for 1 to 24 hours, as they are or in an inert solvent, to give compound (I).

[0041] Examples of the inert solvent are acetonitrile, tetrahydrofuran, 2-butanone, dimethyl sulfoxide and N-methylpyrrolidone. A base such as sodium or potassium carbonate or diisopropylethylamine may be added to the reaction mixture.

[0042] In the above methods, it is possible to purify the resulting substance by removing undesired by-products by recrystallization, pulverization, preparative thin layer chromatography, silica gel flash chromatography (as described in W. C. Still, et al., J. Org. Chem., 43, 2923 (1978)), medium-pressure liquid chromatography and HPLC. The compound produced through HPLC can be isolated as a corresponding sait.

[0043] The starting material used in the above-mentioned methods may be easily manufactured by methods which are known to those skilled in the art - e.g. as shown hereunder.

Manufacturing Method for Starting Compound (II)

[0044]

5

20

[0045] In the formulae, R1a, R1b, R2, Ra, A and Z have are as defined already; Rb is H or an aralkyl-based protective group for amino; and Rc is epoxy, 2-haloacetyl or 1-carboxymethan-1-ol.

[0046] This method is composed of step (a) in which compound (VI) is reacted with compound (VII), followed by reduction to give compound (VIII) adopteding upon the type of Pr; step (b) where protection is conducted when RP of compound (VIII) is H; and step (c) where first is reduced to entino to give compound (II).

[0047] Examples of the aralkyl-based protective group for amino Ln this method are benzyl, p-nitrobenzyl, benzhydryl etc.

Step (a):

[0048] Illustration is made for the following three cases: 35

1) When R^c is spoxy, compound (VI) may be reacted with compound (VII) as in the second manufacturing method. Reaction conditions such as reaction temperature, solvent etc. are also the same.

2) When R° is 2-haloacetyl, compound (Vf) is reacted with compound (Vf) in the presence of a base, followed by reduction to compound (Vfila). The base is the same as in the first manufacturing method. The reduction may be conducted in the above inert solvent of in aboviting to high with stirring in the presence of a reducing agent. Examples of the reducing agent examples of the reducing agent are sodium borohydride or cyanoborohydride, lithium aluminum hydride, borane etc.

3) When R² is 1-carboxymethan-1-ol, compound (VI) is reacted with compound (VII) in the presence of a condensing agent, followed by reduction as in 2) to compound (VIIIa). The condensing agent is the same as in the first manufacturing method.

Step (b):

40

[0049] When R^b In compound (VIIIa) is H, the amino group is protected in customary manner using di-tert-butyl dicarbonate etc., to prepare compound (VIIIa).

Step (c):

[0050] The reduction of nitro to amino may be conducted in customary manner such as metallic reduction using iron, zinc etc. and catalytic reduction using a catalyst such as palladum-carbon, palladam hydroxide-carbon, Raney nickel stc. RH becomes if depending upon the reduction conditions, but if may be profected again in customary manner. Manufacturing Method for Starting Compound (IV)

[0051]

5

10

20

45

A)

 $\begin{array}{c} R^{b}NH_{\lambda} \\ R^{1a} \\ R^{1b} \end{array} \begin{array}{c} NH_{\lambda} \\ NH_{\lambda} \\ R^{1a} \\ R^{1b} \end{array} \begin{array}{c} R^{b}NH_{\lambda} \\ R^{1a} \\ R^{1a} \\ R^{1a} \end{array} \begin{array}{c} R^{b}NH_{\lambda} \\ R^{1a} \\ R^{1a} \\ R^{1a} \end{array} \begin{array}{c} R^{b}NH_{\lambda} \\ R^{1a} \\ R^{1a} \\ R^{1a} \\ R^{1a} \end{array} \begin{array}{c} R^{b}NH_{\lambda} \\ R^{1a} \\ R^{1a} \\ R^{1a} \\ R^{1a} \\ R^{1a} \end{array} \begin{array}{c} R^{b}NH_{\lambda} \\ R^{1a} \\$

[0052] In the formulae, R1s, R1b, Rb, A, B, X and Y1 are as defined already.

[0053] This is a reaction where . compounds (IX) and (III) are subjected to amidation to give compound (IVa), and when R^b is a protective group for amino it is removed to give compound (IV). The amidation reaction can be conducted as in the first manufacturing method, and the reaction conditions such as reaction temperature, solvent etc. are also the same.

B)

[0054] This is a reaction where compounds (X) and (III) are subjected to amidation and then to reduction to give compound (IVb). The amidation can be conducted as in the first manufacturing method, and the reaction conditions such as reaction temperature, solvent are also the same. In the reduction, the above calalytic reduction, or a method where reduction is conducted using sodium biorohydride in the presence of cobatt childride, may be applied.

[0055] For other starting compounds - such as (III), (V), (VI) and (VII) - those which are available in the market or are appropriately synthesized by known methods (such as N-alkylation, cyclization, hydrolysis etc.) from the commercially available compounds may be used.

[0056] The derivative of the present invention which is manufactured as such is isolated and purified as a free compound, a salt thereof obtained by means of salt formation in customary manner, a hydrate, a solvate with various solvents such as entanol etc., or polymorphic cystasis etc. The isolation and purification may be conducted by common chemical operations such as extraction, concentration, evaporation, crystallization, filtration, recrystallization, various chromatographin methods etc.

[0057] Various isomers may be isolated in customary manner utilizing their physico-chemical differences.

[0058] For example, the racemate can be converted to stereochemically pure isomers by common racemic resolution - such as changing it to disstereomer salts with usual optically active (for example tartaric) acid followed by optical resolution, and the like.

[0059] A mixture of diastereomers may be separated by customary methods such as fractional crystallization or chromatography etc. An optically active compound be manufactured starting from an appropriate optically active material.

Industrial Applicability:

50

55

2 [0060] The derivatives(i) and salts thereof have both insulin secretion promoting and insulin sensitivity potentiating actions and also selective β₂-receptor struitating action, and so are useful as therapeutic agents for diabetes mellitus. [0061] As confirmed below by glucose beleared and hypocytemic tests in insulin-resident ground insulin sensitivity potentiating, actions, so that their usefulness in diabetes mellitus is expected. Although the β₁-receptor stimulating action may participate in expression of the insulin secretion promoting and insulin sensitivity potentiating actions, other mechanism might also participate therein; and the details thereof are still unknown. The β₁-receptor stimulating action and the control of the compounds of the present invention is selective to β₂-receptors in human being, it is known that the stimulation of β₂-receptor simulation of γ₃-receptors in the selective of γ₂-receptor simulation of γ₃-receptors in the selective of γ₃-receptors in the selective of γ₄-receptors in the selective of γ₄-receptors in the γ₄-receptor stimulation of γ₅-receptors in the selective of γ₄-receptors in

[0062] The compound of the present invention is also useful as a preventive and therapeutic agent for other diseases of where improvement of symptom can be achieved by reading the symptoms of obesity and hyperlipemia - I.e. achieved coronary diseases such as arterioacierosis, myocardial infarction, angina pectoris etc; cerebral atterioacierosis such as cerebral infarction act; or anounam etc.

[0063] Further, the selective β_3 -receptor stimulating action of the compound of the present invention is useful for prevention and therapy of several diseases reported to be improved by β_3 -receptor stimulation. Examples of these are

[0044] It has been mentioned that the fly-receptor mediates the motility of non-sphishcreal smooth muscle contraction, and because it is believed that selective fly-receptor strutulating science seakes pharmacological control of intesting and motility without accompanying cardiovascular action, the compound of the present invention are useful in therapy of diseases caused by shorned intestinal motility such as various gestrohitecthial describing intesting of the seakes of the season of t

[0066] Moreover, the β₃-adrenaline receptor is capable of causing selective antidepressant action due to attinuitation of the β₂-receptor in the brain, and so the compound of the present invention may be useful as an antidepressant. [0067] The action of the compound of the present invention has been accretiance, by experiments using cells expressing human type receptors, to be selective to β₃-receptors, adverse action as caused by other β₃-receptor stimulation being low or none.

[0068] Effects of the compound of the present invention have been ascertained by the following tests.

1. Hypoglycemic test in kk mice (insulin-resisting model; obesity and hyperglycemia):

Male kk mice (blood sugar level: not lower than 200 mg/df) were subjected to measurement of blood sugar level under feeding and then randomly classified into groups. The drugt be tested was compulsorily administerated orally or subcutaneously once daily for four days, and the blood sugar level after 15 to 18 hours from the final administration was compared with that before the administration (n = 6). The blood was collected from a tail vein of the mice using a glass capillary (previously treated with heparin), the protein was removed thereform, and the amount of glucose in the supernatant fiquid (mg/df) was measured colorimetrically by a glucose oxidase method. The dose at which the blood sugar level was lowered by 30% compared to that before administration of the test drug was expressed as an ED_y value.

The compound of the present invention significantly lowered blood sugar level compared to that before its administration - whether oral or subcutaneous.

Some compounds of the present invention exhibited strong activity so that the ED₃₀ value for oral administration was 3 mg/kg/day or less.

In WO 95/29159, the compound of Example 90 had an ED₃₀ value of 30 mg/kg/day or more, and that of Example 92 an ED₃₀ value of 30 mg/kg/day. From this it is clear that the compounds of the present invention have greater potentiating action to insulin sensitivity than those of WO 95/29159.

2. Glucose tolerance test in normal rats:

10

15

20

25

30

Male rats of SD strain, seven weeks old, were fasted for a whole day and night, then randomly classified into groups and subjected to an onal glucose tolerance test (OGTT) (in = 4). The compound to be tested was administered orally or subcutaneously 50 minutes before administration of glucose (2 g/sp, po.). The blood was collected from the abdominal acrit at the rats anesthetized with pentobarbital (66 mg/sp) using a heparin-treated glass syringe, the profein was removed thereform, and the amount of glucose in the supernatant liquid (mg/sp) was measured colorimetrically by a glucose oxidase method. The insulin value in blood was determined by measuring the amount of glucomnosassy (RIA).

In a group where the compound of the present invention was administered orally or subcutaneously, a significant increase in the Insulin value in blood was observed compared to the group to which no drug was given increase in sugar blood level after administration of glouces was significantly inhibited as well. From this it is apparent that the compound of the present invention has good insulin secretion promoting and hyperglycemia inhibiting actions.

Stimulating test to human β₃-, β₂- and β₁-receptors:

Human β_4 -stimulating action was investigated using an SK-N-MC cell system (cells in which human β_2 -receptor and human β_1 -receptor were permanently expressed were purchased). Similar participations were livestigated using a CHO cell system (cells in which each of human β_2 - and β_1 -receptors was compulsorly expressed were purchased). Similaring action of the compround (10° to 10° 4 yr was investigated by incubating 10° cells/well of each of the cells on a 24-well plate and checking under a sub-complex distributed by incubating 10° cells/well of each of the cells on a 24-well plate and checking under a sub-complex distributed and the producing activity of cyclic AMP (AMP) are ninket. The human β_2 -stimulated before the sub-complex distributed in the producing activity of cyclic AMP (2AMP) are ninket. The human β_2 -stimulated with in each cell (principin) was measured by an IAI Am theritous large "324-CAMP, intensity of action of each compound view compared by activities the p10° value and the maximum activity (1 A. (5) where the maximum reaction of 10° 4M isoproterent) was defined as 100% (from the resulting dose-reaction curve.

[0069] As a result, it has been ascertained that the compound of the present invention has a selective stimulating action to human $\beta_{\pi^{-1}eceptor}$.

[0070] A pharmaceutical composition containing one or more compounds of the present invention as an effective ingredient is prepared using common pharmaceutically acceptable verbides. Administration may be oral, or parenteral - by, for example, injection, suppository, subcutaneous agent, inhalling agent or intracystic infusion.

[0071] The dose may be appropriately decided in each particular case taking into consideration symptom, age, sex etc. of the patient - but usually is around .01 to 100 mg/kg per day for adults for oral administration, as a single dose or divided into 2 to 4 times a day. When intravenous injection is conflucted, depending upon the symptom, the dose is usually around 0.001 to 10 mg/kg per day for adults, administered as a single dose or divided into two or more times

[0072] As a vehicle for the preparation, nontoxic solid or liquid substances for pharmaceuticals may be used.

[0073] Examples of solid composition for oral administration are tablets, pils, capsules, diluted powder and granules. In such a solid composition, one or more active substances are mixed with at least one inert excipient such as lactose, mannitol, glucose, hydroxypropy cellulose, microsystalline cellulose, starch, polythyriporitione, agar, pecufin, magnesium metasilicate aluminate and magnesium aluminate. The composition may also contain additives other than inert excipient (e.g., ubricants such as magnesium aluminate, disintegrants such as calcium cellulose glycolate, stabilizers such as lactose, and auxiliary solubilizers such as glutamic or aspartic acid) in customary manner. Tablets and pils may, if necessary, be coated with suigar such as sucrose, gelarin, hydroxypropyl cellulose, hydroxypropylmethyl cellulose phinhaltet etc., or with film of gastrio or enterior coatins substance.

10074 The liquid composition for oral administration includes pharmacoutically acceptable emulsions, solutions, suspensions, syrups and elbris and contains commonly used inert excipients such as purified water or ethanol. It may further contain auxiliary agents such as moistruiting or suspending spents, severeners, isster agents, anomalic agents and antiseptic agents. The injection for prendreral administration includes aseptic aqueous or non-aqueous solutions, suspensions and emulsions. The non-aqueous solutions and suspensions include, for example, distilled water for injection and physiological saline solution. Examples of the solvent for non-aqueous solution and suspension are propriene glycot, polyettylene glycot; plant oils such as cacao butter, over oil and sessame oil; acholes such as ethanol;

gum arabic; and Polysolvate 80 (trade name). Such a composition may further contain auxiliary agents such as isotonizing agents; antiseptic agents; moisturizing agents; emulsifiers; dispersing agents; stabilizers such as lactose; and auxiliary sobibilizers such as glutamic and aspartic acids. The flould composition may be sterilized, for example, by filtration through a bacteria-preserving filter or by irradiation or compounding with a bacterials; it may also be made by manufacturing a sterile solid composition, followed by dissolving in sterile water or a sterile solvent for injection before use.

Best Mode for Carrying Out the Invention:

[0075] The present invention is further illustrated by way of Examples hereunder. The present invention is not limited to compounds mentioned in the Examples but covers all derivatives of formula (t), salts thereof, hydrates thereof, geometric and optical isomers thereof and polymorphic forms thereof. Novel starting materials used in the Examples are illustrated by the following Referential Examples.

15 Referential Example 1:

[0076] To a mixed solution of ethyl acetate and a 1N aqueous solution of sodium hydroxide was added 25.2 g of 4-hitrophenyl vihiyamine hydrochioride, and the mixture was vigorously stirred. The organic layer was dried over anhydrous magnesium suitate and the solvent was evaporated. To the resulting residue were added 100 mi of 2-propanol and 15.0 g of (Ph-sybrene odde successively, and the resultion mixture was heated to reflux for 12 hours. The solvent was evaporated in vacuo, and the residue was purified by silica gel column chromatography (eluent: hotroform/methand = 100/1 – 1011). The resulting residue was significant to silica gel column chromatography (eluent: hotroform/methand = 100/1 – 1011). The resulting residue was significant to silica gel column chromatography (eluent: hotroform/methethyl scelate/fiveltylamine = 175/race) to give 20 g of (Ph-1)-hearty-2(24-4-dhrophynghylamine)ethylamine).

25 Referential Example 2:

[0077] A solution of 8.02 g of (R)-1-phenyl-2-([2-(4-nitrophenyl)ethyllaminojethanol and 6.30 g of di-tert-butyl dicurbonate in 80 ml of tetrahydrofuran was stirred for 12 hours at room temperature. The residue obtained by evaporation of the solvent was purified by silica gel column chromatography (eluent: hexane/ethyl acetate = 3/1) to give 10.8 g of tert-butyl (R)-N-(2-hydroxy-2-phenylethyl)-N-[2-(4-nitrophenylethylcamate.

Referential Example 3:

IOST8] To a solution of tert-butyl (R)-N-(2-hydroxy-2-phenylethyl)-N-[2-(4-hitrophenyl)ethyl)carbarnate in 200 ml of shand was added 1.03 g of 10% paladum-carbon and the mixture was stirred for two hours at room temperature in a hydrogen atmosphere under atmosphere pressure. Insoluble matters were removed using Celle, and the filtrate was concentrated in vacuo to give 9.54 g of tert-butyl (R)-N-[2-(4-aminophenyl)-N-(2-hydroxy-2-phenylethyl)-stripin-carbarnate.

40 Referential Example 4:

[0079] To a solution of 448 mg of terr-butyl (R)-N-{2-(4-aminopheny)-N-{2-hydroxy-2-phenylethyl)ethyl(parbarsate and 330 mg of triethylamine in 4 mi of chloroform was added 146 mg of 2-pyridinecarbonyl chloride. The reaction solution was strieted at room temperature for two hours, and the solvent was evaporated in vacor. The residue was diluted with chloroform, and the organic layer was washed with a saturated aqueous solution of sodium hydrogen cerbonate and ride over anhydrous magnesium suitate. The residue obtained by evaporating the solvent in vacuo was purified by silice age clorum chromatography (elsent: hexane/ethyl acetate = 1/3) to give \$21 mg of terl-butyl (R) - N-{2-hydroxy-2-phenylethyl)-R-2-4(-2-pyridinecatoryylamiophenylethyl)-garbaraten (P)-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyridinecatory-Pyrid

50 Referential Example 5:

[0869] To a solution of 377 mg of tert butly (F)-N12-(4-aminopheny)-N-(2-hydroxy-2-phenylethylethylicarbarsate in 10 mf of tetrahydrofuran were added 203 mg of 1-tethy-13-d-dimethylaminoprophylcarbodilmide hydrochlorida, 143 mg of 1-hydroxybenzofizazioe and 202 mg of 8-quindinecearboxylic acid successively. The reaction solution was stirred at room temperature for 18.5 hours, and the solvent was everporated in vacuo. The residue was diluted with ethyl categories and the solvent was estimated and vice oscillute of solution hydrogen carbonise and dried over arrhydrous magnesium sulfate. The residue obtained by everporation of the solvent was purificately slicia get column chromatography (cleuret: hosanderfly) accessed = 21) to give 302 mg of tert-butly (Ry-Ny-dy-vyoxy-2-pheny-tehyl)

-N-[2-[4-[(8-quinolinecarbonyl)amino]phenyl]ethyl]carbamate.

Referential Example 6:

5 [0081] To a solution of 403 mg of tert-butyl (R)-N-(2-hydroxy-2-phenylethyl)-N-[2-[4-(2-1H-imidazol-2-ylacetyl)am-no)phenyljethyljcarbamate in 10 mi of actorithiie were added 120 mg of polassium carbonate and 164 mg of 2-fluorobernyl bromide successively at room temperature. The reaction solution was strired at 50°C for 12 hours, insoluble matters were filtered off using Cellie, and the solvent was evaporated. The resulting residue was purified by silica gel column chromategraphy to give 25° and of 16th July (Tip-NI₂14-(II-[2-fluorobernyl)-1H-imidazol-2-yijacetyljamino) phenyljethyl-N-(2-hydroxy-2-phenylethyl-a-terhante.

Referential Example 7:

[0882] To a solution of 13.4 go (fil)-2(h-benzyl-N-2(4-ntirophenyl)ethyljamino)-t-phenylethanol in 150 ml of methanol were added 8.6 go from powder and 40 ml of a 2n eapseus hydrocholor add solution. The reaction mixture was heated to reflux for two hours, a 11 eapseus solution of sodium hydroxide was added thereto, and the insolution matters thus produced were filtered of lasing Cellio. The filtrate was concentrated in viscus to remove the methanol. The resulting aqueous phase/was extracted with choren, the organic layer was dided over analyticus magnetium sufface, and the solvent was evaporated in viscus. The resulting residue was purified by afficial gel column chromatography (eluent: hexane/ethyl acetate = 11) to give 11.4 g of (fil)-2(1)-2(4-dimstophenyl)-4(1)-Nebrzylaminol-1-phenyleth-and.

Referențial Example 8:

39 [0083] To 502 mg of (R)-2-(N-1/2-(4-aminopheny)ethyl]-N-benzylamino)-1-phenylathanol were added 336 mg of ethyl 2-(3-amithylydin-2-yl)acetate and 10 ml of zylene. The reaction mixture was refluxed for nine hours, and the solvent was everporated in vacuo. The resulting residue was purified by aliac gel column chromatography (elabert: hexanal visit coatale - 1/3) to give 222 mg of (R)-4*(2-(N-benzyl-N-(2-hydroxy-2-phenylethyl)aminojethyl)-2-(3-methylpyridin-2-yl)acetanilide.

Referential Example 9:

[0084] To a solution of 0.96 g of 2-fluoroacetophenone in 20 ml of tetrahydrofuran was added 2.66 g of benzylirimethyfammonium tribroriide. The reaction mixture was stirred at room temperature for 30 minutes, insoluble matters
were filtered off, and the solvent was concentrated in vacuo. The resulting residue was dissolved in 40 ml of 2-butanone,
then 1.81 g of N-benzyl-4-nitrophenethyfamine and 0.82 g of discoproyl ethyfamine were added, and the reaction
mixture was heated to reflittor one hout. The solvent was evaporated in vacuo, othy excetae was added hereto, and
the mixture was washed with water and a saturated saline solution successively. The organic layer was dried over
anhydrous mangenelum sulfate and evaporated in vacuo. The resulting residue was dissolved in 40 m of methods or 10.34 g of sodium borohydride was added thereto, and the reaction mixture was street at room temperature for one hour. The solvent was evaporated in vacuo, ethyl acetate was added, and the mixture was washed with water and a saturated saline solution successively. The organic layer was field over anhydrous magnesium sulfate and evaporated in vacuo. The resulting residue was purified by silica gel column chromatography (eluent: chloroform) to give 1.55 g of 2-(N-benzyl-N-E/2-4-intorporhyethytiminah-of-1-2-fluorophenythethanol.

Referential Example 10:

45

[0085] A reaction mixture of 5.12 g of methyl 2-pyridylacetate, 5.14 g of 4-aminobenzyl cyanida and 50 ml of xylene was heated to reflux for 24 hours. An appropriate amount of the solvent was evaporated, diethyl ether was added to the residue, and the resulting crystale were taken by filtration to give 5.65 g of 4-cyanomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-yonomethyl-2-yonomethyl-2-(2-yonomethyl-2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-(2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonomethyl-2-yonom

Referential Example 11:

[0086] To a solution of 640 mg of 4-yanomethyl-2-(4,6-dimethyl-2-pyrktyl)acetamilde in 15 ml of tetrahydrofuran was added 15 ml of an ethanolic suspension of a Raney nickel, and concentrated aqueous armonia was added to adjust the pH of the mixture to about 10. The mixture was stiffed at room temperature for one hour in a hydrogen almosphere under armospheric pressure. The reaction mixture was filtered using Ceitle, and the solvent was evaporated in vacuo to give 640 mg of 4/c-aminomethyl-2-(4,6-dimethyl-2-pyrhyl)qosteraline to give 640 mg of 4/c-aminomethyl-2-(4,6-dimethyl-2-pyrhyl)qosteraline.

Referential Example 12:

[0037] To a solution of 630 mg of 4-(2-aminometryl)-2-(4,6-dimetryl-2-pyrityl) acetanilide in 20 ml of toluene was added 0.27 ml of benzaldetylde, and the mixture was heated to reflux for three hours using a Dean-Starke apparatus. The reaction mixture was filtered, and the solvent was evaporated in vacuo. A solution of the resulting residue in 30 ml of methanol was cooled at 0°C, 65 mg of sodium borohydride was added, and the mixture was stirred at 0°C for one hour. About one-half of the solvent of the reaction mixture was evaporated in vacuo, water and eithy acetate were added to the residue, the organic layer was washed with a saturated saline solution twice and eried over anthydrous magnesium sultate and the solvent was evaporated in vacuo. To a solution of the residue, for of isopropanol was added 0.26 ml of (R)-styrene oxide, and the mixture was heated to reflux for 12 hours. The solvent was evaporated in vacuo, and the resulting residue in 60 ml organic particular solvent was evaporated in 3 give 920 mg of (R)-4*-(2-(N-benzy)-4-N-einy)-4-pheny(eityly)-aninoletyli(2-4-(4-d-intertyl-2-vyridn))-acetanilide.

Example 1:

35

50

55

[0088] A 4N hydrogen chloride-ethyl acetate solution (10 ml) was added to 10 ml of an ethanolic solution of 458 mg of tert-butyl (F),-N-(2-hydroxy-2-phenylethyl)-N-(2-l-4/(2-pyridinecasbony)gamin-lophenyllethyl[carbamate. The reaction solution was strired at room temperature for three buns, and the solvent was then evaporated in vecuo. The obtained crude crystals were recrystallized from methanol-ethanol-ethyl acetate to give 289 mg of (R)-4'-2-(2-hydroxy-2-phenylethyl)-2-pyridinecarboxanilide dihydrocholide.

[0089] The compounds of Examples 2 to 33 were prepared in the same manner as in Example 1.

2

 $(R)-2-[1-(4-Fluor obenzyl)-1H-tetrazol-5-yl]-4'-[2-[(2-hydroxy-2-phenylethyl)amino] ethyl] acetanilide \ hydrochloride$

5 Example 31:

 $(R)-2-\{2-(3,4-Dichlorobenzyl)-1H-tetrazol-5-yl]-4'-\{2-\{(2-hydroxy-2-phenylethyl)amino]ethyl]acetanilide \ hydrochloride \ hy$

Example 32:

(R)-2-{2-(4-Fluorobenzyl)-1H-tetrazol-5-yi]-4-{2-{(2-hydroxy-2-phenylethyl)aminojethyl)acetanilide hydrochloride Example 33:

15 (R)-241-(3,4-Dichlorobenzyl)-1H-tetrazol-5-yl]-4-[2-(2-hydroxy-2-phenylethyl)amino]ethyl]acetanilide hydrochloride Example 34:

To a solution of 175 mg of tert-butly (Rh-N£24-(Le-(1H-1,2.4-triazol-3-yi)acetylamino.phenyljethyl)-N-(2-hydroxy-2-phenylethyl)-cabamate in 5 mil of methanol was added 4 mil of a solution of 4N hydrogen chlorido in ethyl acetata. The mixture was stirred at room temperature for three hours, the solvent was filtered (3, and the restuling prowder was washed with othanol. The resulting prowder was dried to give 125 mg of (R)-4-(2-((2-hydroxy-2-phenylethyl)amino) ethyl)-2-(((1+2,-4-triazol-3-y))-acetalmide (layforcholidote).

25 [0090] The compounds of Examples 35 to 40 were prepared in the same manner as in Example 34.
Example 35:

(R)-2-(5-Benzylsulfanyl-1H-1,2,4-triazol-3-yl)-4-[2-{(2-hydroxy-2-phenylethyl)amino]ethyl]acetaniiide dihydrochloride

Example 36:

(R)-2-(2-Acetamidothiazol-4-yl)-4'-[2-[(2-hydroxy-2-phenylethyl)amino]ethyl]acetanilide hydrochloride

35 Example 37:

 $(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amlno] ethyl]-2-(2-methanesulfonamldothlazol-4-yl)acetanillde \ hydrochloride$

Example 38:

(R)-2-(2-Guanidinothiazol-4-yl)-4*-[2-{(2-hydroxy-2-phenylethyl)amino)ethyl)acetanilide dihydrochloride Example 39:

[0091] (R)-4-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(2-phenylaminothlazol-4-yl)acetanilide hydrochloride Example 40:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-[1-(4-nitrobenzyl)-1H-Imidazol-2-yl]acetanilide hydrochloride

Example 41:

[0092] To 890 mg of tert-butyl (R)-N-1/2-(4-1/2-(2-amino-thiazoi-4-yi)acetamino-phenyljethyl)-N-1/(2-hydroxy-2-phenyl) ethyl(parbamate were added 30 mi of methanol and 15 mi of a solution of 4N hydrogen chloride in eithyl acetale, and the mixture was surpracted in vacuo, and the residue was purified by reverse phase column chromatography (eluent: water/methanol = 2/1) to give 310 mg of (R)-2-(2-aminothiazoi-4-y)-4-(2-2-(2-divoy-2-2-phenylatryl)-pain-lojethyl(acetanillibo dihydrochloride).

[0093] The compounds of Examples 42 to 57 mere prepared in the same manner as in Example 41.

		42

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-(2-amino-thiazol-4-yl)carboxanilide hydrochloride

Example 43:

 $\textbf{(R)-2-(2-Amino-5-methylthiazol-4-yl)-4'-\{2-\{(2-hydroxy-2-phenylethyl)amino\}ethyl)} ace tanilide\ dihydrochloride\ dihydro$

Example 44:

(R)-2-{2-AminothiazoI-4-yl)-2-methyl-4-{2-{(2-hydroxy-2-phenylethyl)amino]ethyl)proplonaniide hydrochloride Example 45:

16 (R)-4-(2-((2-Hydroxy-2-phenylethyl)amino)ethyl)-(2-amino-4,5,6,7-tetrahydrobenzothiazol-4-yi)carboxanilide dihydrochloride

Example 46:

- 20 (R)-4-12-(12-thydroxy-2-phenylethyl)aminojethyl)-2-(imidiazol(2,1-b)lthiazol-6-yi)acetanilide hydrochloride Example 47:
- (R)-2-(1-Benzyl-1H-1,2,4-triazol-5-yl)-4'-[2-((2-hydroxy-2-phenylethyl)amino]ethyl]acetanllide hydrochloride
 29

 Example 48:

(R)-2-(1-Benzyl-1H-1,2,4-triazol-3-yl)-4'-[2-((2-hydroxy-2-phenylethyl)amino]ethyl]acetaniiide hydrochloride

30 Example 49:

 $(R) - 2 - (3-Benzyl - 2-thloxothlazol - 4-yl) - 4^{-}[2-(2-hydroxy - 2-phenylethyl) a mino] ethyl] acetanilide \ hydrochloride \ hydroxylethyl) a mino ethyl (acetanilide \ hydroxylethyl) a mino e$

Example 50

(R)-4-{2-{(2-Hydroxy-2-phenylethyl)amino)lethyl}-{5,6,7,8-tetrehydroquinolin-8-yt)carboxenliide dihydrochloride Example 51:

- 40 (R)-4-(2-flydroxy-2-phenyletty/j)aminojethy/j)-2-(1-phenyl-1H-imidazol-2-y/j)acetanilide dihydrochloride Example 52:
- $\label{eq:controlled} $$(R)-4'\cdot[2-[(2-Hydroxy-2-phenylethyl)amino]$ ethyl]-2-[(1-(4-Isopropylbenzyl)-1H-Imidazol-2-yl)acetanliide dihydrochloride$

Example 53:

(R)-4-[2-f(2-thydroxy-2-phenylethyl)amino]ethyl)-2-f(1-(4-phenylbenzyl)-1H-imidazol-2-yl)acetanilide dihydrochloride so Example 54:

(R)-2-[1-(2-Chlorobenzyl)-1H-imidazol-2-yl]-4'-[2-[(2-hydroxy-2-phenylethyl)amino]ethyl]acetanilide dihydrochloride

55 Example 55:

(R)-2-[1-(3-Chlorobenzyl)-1H-imidazol-2-yl]-4'-[2-[(2-hydroxy-2-phenylethyl)amino]ethyl]acetanliide dihydrochloride

Example 56:

 $(R) - 2 - \{1 - (3,4 - Dichlorobenzyl) - 1 H-imidazol - 2 - yl] - 4 - \{2 - \{(2 - hydroxy - 2 - phenylethyl) amino]ethyl]acetaniilide dihydrochloride$

Example 57:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-[(1-(2-pyridyl)methyl-1H-imidazol-2-yl)acetanilide dihydrochloride

10 [0094] The compound of Example 58 was prepared by the same manner as in Example 1.

Example 58:

(R)-2-(2-aminopyridin-6-yl)-4'-[2-[(2-hydroxy-2-phenylethyl)amino]ethyl]acetanilide dihydrochloride

Example 59

[0095] To a solution of tert-butyl (R)-N-{2-{4-{12-{2-amino-thiazol-4-yi}-2-oxoacetyljaminojphenyljethyjl-N-{2-hydroxy-2-phenylethyl) carbarate in 30 ml of methanol was added 130 mg of sodium borohydride at noon temperature. The reaction mixture was attered at room temperature for three hours, and the solvent was evaporated in vacuo. The residue was dissolved in 5 ml of methanol, and to this reaction solution was added 10 ml of a solution of 4N hydrogen chloride-ethyl acetate. The receition solution was suitered at room temperature for eight hours and the solvent was evaporated in vacuo. The residue was purified by silica gel column chromatography (eluent: water/methanol = 5/1) to give 10 ml of 1

Example 60:

45

50

66

[0096] To 349 mg of tert-butyl (R)-N+2-(4+[[2-(2-benzyloxypyridin-6-yi)acety]]amino[phenyl[ethy]]-N-(2-hydroxy-2-phenylethy)-partamate were added 475 mg of pentamethylbenzene and 6 mi of trifluoroacetic acid successively. The reaction solution was stirred at room temperature for frue horey, and the solvent was evaporated in vacuo. To the residue were added water and potassium carbonate to make the solution basic, and the aqueous phase was extrated with a mixed solvent of chior form and tetralypriorant. The organic layer was dried over-anilyprious magnetism suifate, and the solvent was evaporated in vacuo. The residue was purified by silica gel column chromatography (eluent: chloroform/temtanol = 10/1 - 6-5/1). To an ethanical solution of the resulting recidue was added 100 µ of a 4h hydropic chlorids-ethyl acetata solution, and then the solvent was evaporated in vacuo. The resulting recidue reystate were encrystallized from ethanol-ethyl acetata to give 55 mg of (R)-2-(2-benzyloxypyridin-6-yi)-4-[2-((2-hydroxy-2-phenylethyl) amholethyl acetatalitic hydrochloride.

[0097] The compounds of Examples 61 to 76, 83 and 85 were prepared in the same manner as in Example 1; and the compounds of Examples 77 to 82 were prepared in the same manner as in Example 41.

Example 61:

(R)-4'-[2-f(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(2-methylpropyl-1H-imidazol-2-yl)acetanilide dihydrochloride

Example 62:

 $(R)-2-[1-(2-Fluorobenzyl)-1H-Imidazol-2-yl]-4^{-}[2-(2-hydroxy-2-phenylethyl)amino] ethyl] acetanilide \ dihydrochloride$

Example 63:

 $(F)-2-\{1-(3-Fluorobenzyl)-1H-imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl] acetanilide dihydrochloride (F)-2-\{1-(3-Fluorobenzyl)-1H-imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl] acetanilide dihydrochloride (F)-2-\{1-(3-Fluorobenzyl)-1H-imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl] acetanilide dihydrochloride (F)-2-\{1-(3-Fluorobenzyl)-1H-imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl] acetanilide dihydrochloride (F)-2-\{1-(3-Fluorobenzyl)-1H-imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl] acetanilide (F)-2-\{1-(3-Fluorobenzyl)-1H-imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl] acetanilide (F)-2-\{1-(3-hydroxy-2-phenylethyl)amino]ethyl] acetanilide (F)-2-\{1-(3-hydroxy-2-phenylethyl)amino]ethyl] acetanilide (F)-2-\{1-(3-hydroxy-2-phenylethyl)amino]ethyl] acetanilide (F)-2-\{1-(3-hydroxy-2-phenylethyl)amino]ethyl] acetanilide (F)-2-\{1-(3-hydroxy-2-phenylethyl)amino]ethyl] acetanilide (F)-2-\{1-(3-hydroxy-2-phenylethyl)amino]ethyl] acetanilide (F)-2-\{1-(3-hydroxy-2-phenylethyl)amino]ethyllaga (F)-2-(1-hydroxy-2-phenylethyl)amino]ethyllaga (F)-2-(1-hydroxy-2-phenylethyl)amino]ethyllaga (F)-2-(1-hydroxy-2-phenylethyl)amino]ethyllaga (F)-2-(1-hydroxy-2-phenylethyl)amino]ethyllaga (F)-2-(1-hydroxy-2-phenylethyl)amino]ethyllaga (F)-2-(1-hydroxy-2-phenylethyl)amino]ethyllaga (F)-2-(1-hydroxy-2-phenylethyl)amino]ethyllaga (F)-2-(1-hydroxy-2-phenylethyllaga (F)-2-(1-hydroxy-$

Example 64:

15 (B)-2-[1-(2,4-Diffuorobenzyl)-1H-Imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl)acetanilide dihydrochloride

Example 65:

20 (R)-2-[1-(2,6-Diffuorobenzyi)-1H-Imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl]acetanilide dihydrochloride

Example 66:

25 (R)-2-[1-(3,5-Difluorobenzyl)-1H-imldazoi-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl]acetaniilde dihydrochloride

Example 67:

30 (R)-2-[1-(2,5-Difluorobenzyl)-1H-imidazol-2-yl]-4*-[2-(2-hydroxy-2-phenylethyl)amino]ethyl]acetanliide dihydrochloride

Example 68:

35 (F)-2-{1-(3,4-Difluorobenzyi)-1H-imidazol-2-yl]-4'-{2-(2-hydroxy-2-phenylethyi)amino]ethyl]acetanliide dihydrochloride

Example 69:

40 (R)-4'-[2-((2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(1-(2,3,8-trifluorobenzyl)-1H-Imidazol-2-yl]acetanliide dihydrochloride

Example 70:

45 (R)-4-[2-[(2-Hydroxy-2-phenylethyl)amirio]ethyl]-2-[1-(2,4,5-trifluorobenzyl)-1H-Imidazol-2-yl]acetaniiide dihydrochloride

Example 71:

 (R)-4¹(2-{(2-thydroxy-2-phenylethyl)amino]ethyl]-2-{1-(3,4,5-trifluorobenzyl)-1H-Imidazol-2-yl]acetaniilde dihydrochloride

Example 72:

 (R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-[1-(2,3,4,5,6-pentafluorobenzyl)-1H-imidazol-2-yl]acetanillde dihydrochloride

Example 73:

- (R).4-[2-{[2-Hydroxy-2-phenylethyl]amino]ethyl]-2-{1-(3-iodobenzyl)-1H-imidazol-2-yl]acetanilide dihydrochloride Example 74:
- 5 (R)-2-{1-(2,6-Dichlorobenzyl)-1H-imidazol-2-yi]-4'-{(2-hydroxy-2-phenylethyl)amino]ethyl]acetanliide hydrochloride Example 75:
- (R)-2{1-(4-Cyanobenzyl)-1H-imidazol-2-yl)-4-{2-(2-hydroxy-2-phenylethyl)aminolethyl)acetanliide dihydrochloride to Example 76:
 - (R)-4'-[2-{(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-{1-(quinolin-2-yl)-1H-imidazol-2-yl]acetanilide trihydrochloride
- 15 Example 77:
 - $(R) 2 \{1 (2 Chloro 6 fluorobenzyl) 1 + Imidazol 2 yl] 4 \{2 (2 hydroxy 2 phenylethyl)amino] ethyl] acetanilide (R) 2 \{1 (2 Chloro 6 fluorobenzyl) 1 + Imidazol 2 yl] 4 \{2 (2 hydroxy 2 phenylethyl)amino] ethyl] 2 \{1 (2 Chloro 6 fluorobenzyl) 1 + Imidazol 2 yl] 4 \{2 (2 hydroxy 2 phenylethyl)amino] ethyl] 2 \{1 (2 hydroxy 2 phenylethyl)amino] ethyllagen ethyllagen$
- Example 78:
- (R)-2-{1-(2-Chlore-4-fluorobenzyl)-1H-imidazol-2-yl}-4'-{2-(2-hydroxy-2-phenylethyl)aminojethyl]acetanilide Example 79:
- 25 (R)-2-[1-(2,5-Dichlorobenzyl)-1H-imidazol-2-yl]-4'-[2-(2-hydroxy-2-phenylethyl)amino]ethyl]acetanliide dihydrochloride
 - Example 80:
- 30 (R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-[1-(2,3,4-trifluorobenzyl)-1H-Imidazol-2-yi]acetanliide dihydrochloride
 - Example 81:
- 35 .-(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-[1-(4-methoxycarbonylbenzyl)-1H-imidazoi-2-yl]acetaniilde dihydrochloride
 - Example 82:
- 40 (R)-4'-{2-((2-Hydroxy-2-phenylethyl)amino)ethyl)-2-{1-{(piperidine-1-carbonyl)banzyl]-1H-imidazol-2-yl]acetanliide dihydrochloride
 - Example 83:
- 45 (R)-4'-[2-{(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(1-pyrazolyl)acetanliide hydrochloride
 - Example 84:
- (R)-41-[2-[(2-Hydroxy-2-phenylethy!)amino]ethyl]-2-(1,2,4-triazol-1-yl)acetanilide dihydrochloride
 - Example 85:
 - (R)-2-(2-Aminobenzimidazol-1-yl)-4'-[2-[(2-hydroxy-2-phenylethyl)amino]ethyl]acetanllide dihydrochloride
- 55 Example 86:
 - [0098] To a solution of 20.1 g of 4*[2-{N-benzyl-N-(2-hydroxy-2-phenylethyl)arninolethyl]-2-(2-pyridy)acetanilide in 400 ml of methanol was added 5.96 g of 10% palladium-carbon. The reaction solution was stirred for six hours in a

Date out

hydrogen almosphere under atmospheric pressure. Insoluble matters were filtered off using Celife and the filtrate was concentrated in vacuo. To a methanoic solution of the resulting residue was added 10.8 m of a 4N hydrogen chlorideethly acatate solution, and the solvent was evaporated in vacuo. The resulting roude crystals were recrystalized from methanol-ethanol to give (R)-4-[2-[4/chydrox/2-chpnrylethylpamiolpthyl]-2/cpyridylpactantilide hydrochloride.

[0099] The compounds of 87 to 90 were prepared in the same manner as in Example 86.

Example 87:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(3-pyridyl)acetanilide hydrochloride

Example 88:

(R)-4'-[2-{(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(4-pyridyl)acetanilide hydrochloride

15 Example 89:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-3-(2-pyridyl)propionanilide hydrochloride

Example 90:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-[(1-phenylethyl)-1H-imidazol-2-yl]acetanilide dihydrochloride

Example 91:

25 [0100] (R)-2-(1H-Benzimidazol-2-y)-41-(4-[2-(N-benzyl-N-(2-hydroxy-2-phenylethy))amino|ethy[phenyl]acetanlilide (240 mg) was dissolved in 30 mid of banch, then 170 mg of 10% paladum-carbon was added thereto and the mixture was stirred for nine hours in a hydrogen atmosphere burder amospheric pressure. The catalyst was filtered off, the solvent was evaporated in vacuo, and the residue was washed with ethanol-cathyl acetate to give 200 mg of (R)-2-(1H-benzimidazol-2-y)-4-12/(2-(1y-doxy-2-phenylethy)amino|ethy|acetanlide.

30 [0101] The compounds of Examples 92 and 93 were prepared in the same manner as in Example 86.

Example 92:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(3-methylpyridin-2-yl]acetanilide hydrochloride

Example 93:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(2-pyrazinyl)acetanilide hydrochloride

40 Example 94:

[0102] (R)-4'-(4-[2-[N-Banzy+N-(2-hydroxy-2-phenylethyl)aminolethyl)phenyl|-2-(1-benzy|-1H-imidazol-2-y|) acetanilide (350 mg) was disabved in 20 mil of ethanol, then 130 mg of 10% palladium-carbon was added thereto, and the mibuture was stred for 17.5 hours in a hydrogen atmosphere under atmosphete pressure. The catalyst was filtered off, the solvent was evaporated in vacuo, and the residue was purified by silice gel column chromatography (eluent: chloroform/methanol/concentrated equeues ammonis = 2001/01). The resulting only substance was dissolved in methanol, and 280 µl of a 4N hydrogen chloride-ethyl accatae solution was added thereto. The mibuture was filtered after adding active carbon thereto, and the solvent was evaporated in vacuo to give 200 mg of (R)-2-(1-benzyl-1H-imidazol-2-y))-4-(2-(2-hydroxy-2-phenylethyl)paminolethylloglacetalialide dihydrochloride.

[0103] The compounds of Examples 95 and 97 were prepared in the same manner as in Example 91; the compounds of Examples 98 and 100 were prepared in the same manner as in Example 9.4; and the compounds of Examples 99

and 101 to 103 were prepared in the same manner as in Example 86.

Example 95:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(4-methyl-2-pyridyl)acetanilide

Example 96:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(5-methyl-2-pyridyl)acetanilide

Example 97:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(6-methyl-2-pyridyl)acetanilide

Example 98:

15 4'-[(R)-2-[((R)-2-Hydroxy-2-phenylethyl)amino]propyl]-2-(2-pyridyl)acetanilide hydrochloride

Example 99:

4'-[(S)-2-[((R)-2-Hydroxy-2-phenylethyl)amino]propyl]-2-(2-pyridyl)acetanilide hydrochloride

Example 100:

2-(1-Benzyl-1H-imidazol-2-yl)-4'-[(S)-2-[((R)-2-hydroxy-2-phenylethyl)amino]propyl]acetanilide hydrochloride

Example 101:

4'-[2-[[2-Hydroxy-2-(2-fluorophenyl)ethyl]amino]ethyl]-2-(2-pyridyl)acetanilide hydrochloride

Example 102:

4'-[2-[[2-Hydroxy-2-(3-fluorophenyl]ethyl]amino]ethyl]-2-(2-pyrldyl)acetanilide hydrochloride

Example 103:

35 4'-[2-[[2-Hydroxy-2-(4-fluorophenyl)ethyl]amino]ethyl]-2-(2-pyridyl)acetanilide hydrochloride

Example 104:

[0104] To a solution of 805 mg of 4"-opanomethyte2;(2-yyrindinn)]acetamities in 30 mil of tearbyrindurian were added 30 mil of an eithenalic solution of Reney incket and 3 mil of concentrated aquous armonitis. The reaction solution was attreed for four hours in a hydrogen atmosphere under atmosphere; when insoluble matters were illiered of using Cellins, and the solvent was evaporated. The hierarchite were added 10 mil or 10 2 propered, 300 mg of (5)—styrene oxide and 2 mil of methanol successively. The reaction mixture was heated to million to thous, and the solvent was evaporated. The residue was explained by allicia gel column chromatography and the solvent was exporated in the residue was explained and the solvent was exporated in Yeau. The resulting residue was cyntatical for methanolic solution of the resulting tracking was added 150 µg of 44th hydrogen choice of the solution, and the solvent was exporated in Yeau. The resulting residue was cyntatical for methanol-tiethy acetate and then recrystalized from extended from the solvent was exporated in Yeau. The resulting residue was cyntatical deform methanol-tiethy short of years and the properties of the proprint of the solvent was exporated in Yeau. The resulting residue was cyntatical deform methanol-tiethy short of years are shorted and the proprint of the propri

[0105] The compounds of Examples 105 to 108 were prepared in the same manner as in Example 104; and the compound of Example 109 was prepared in the same manner as in Example 91.

55

Example 105:

(R)-4'-[2-[(2-Hydroxy-2-phenylethyl)amino]ethyl]-2-(2-quinolyl)acetanilide hydrochloride

Example 106:

(R)-4'-[2-[[2-Hydroxy-2-(3-chlorophenyl]ethyl]amino]ethyl]-2-(2-pyridyl)acetanilide hydrochloride

Example 107:

10

4'-[2-[[2-Hydroxy-2-(3-pyridyl)ethyl]amino]ethyl]-2-(2-pyridyl)acetanilide hydrochloride

Example 108:

15 (R)-2-[1-(4-Chlorobenzyl)-1H-benzimidazol-2-yl]-4'-[2-[(2-hydroxy-2-phenylethyl)amino]ethyl]acetanilide dihydrochloride

Example 109:

20 (R)-2-(4,6-Dimethyl-2-pyridyl)-4'-[2-[(2-hydroxy-2-phenylethyl)amino]ethyl]acetanliide

Example 110:

[0106] To 4'-(3-aminopropyl)-2-(2-pyridyl)acetanilide were added 10 mi of 2-propanol and 600 mg of (R)-styrene 25 oxide successively. The reaction mixture was heated to reflux for four hours, and the solvent was evaporated. The residue was purified by silice go cloume normography feluent childronforn/mixthanal -90' → 10'1). To a methanolic solution of the resulting residue was added 100 µl of a 4N hydrogen chloride-ethyl acetate solution, and the solvent was evaporated in vaccu. The resulting oracle crystals were recrystalized from ethanol-diathyl ether to give 71 mg of (R)-4'-[3-(2-hydroxy-2-phenylethyl)amino[propyl]-2-(2-pyridyl)acetanile hydrochloridalic hyd

Example 111:

[0107] To a solution of 3.82 g of ten's buyl N-[2-(4-[]2-(2-pyridy)]acety]amino]phenoxyjethy[carbarnate in 30 ml of methanol was added 50 ml of a 44 hydrochloride-eithy acetate solution. After the reaction solution was stirred at room to the solution of the solution was stirred at the solution of the solution of the solution of sodium hydrogen carbonate and polarisation carbonate solution of sodium hydrogen carbonate and polarisation carbonate that the solution of the solution

45 Example 112:

[0108] To a solution of 490 mg of tert-butyl N-{1,1-dimethyl-2-{4-\frac{12}{2}-2-pyridy}]acetyl[aminc]phenyl[ethyl[carbamate in 10 ml of methanol was added 30 ml of a 4N hydrochloride-ethyl acetate solution. After the reaction solution was stirred at room temperature for eighthours, the solvent was everporated in vacuo. To the residue were added an auyeous solution of sodium hydrogen carbonate and potassium carbonate to adjust to pH about 12. The resulting aqueous phase was extracted with a mixed solvent of chloroform and tetrahydrouran. The organic layer was defed over anhydrous magnesium sulfate and concentrated, the resulting residue was dissolved in 2 ml of 2-properol and 2 ml of methanol, and 120 mg of (R3-vivreno oxide was added thorror. After the reaction solution was the setated to retifux for 24 hours, the solvent was evaporated in vacuo. The resulting residue was purified by sitics gel column chromatography (elsent: chloroform/methanol - 3017) and dissolved in methanol, 0.1 ml of a 4N hydrogen chloride-ethyl ecletate solution was added, and the solvent was evaporated in vacuo. The resulting residue was purified by siticg agel column chromatography (elsent: chloroform/methanol = 37) and reverse phase column chromatography (elsent: chloroform/methanol = 37) and reverse phase column chromatography (elsent: chloroform/methanol = 37) and reverse phase column chromatography (elsent: chloroform/methanol = 37) and reverse phase column chromatography (elsent: water/meth-incentral) and resulting residue was purified by sition (R1)-42-2 dimethyl-2(12-hydroy-2-phenylethyl)-antenjed-lyl)-2(2-phydroy-2-phenylethyl)-antenjed-lyl)-2(2-phydroy-2-phenylethyl)-acetal-incentral solution was added, and the solvent was evaporated in vacuo. The resulting residue was purified by sition (R1)-42-2 dimethyl-2(12-hydroy-2-phenylethyl)-acetal-incentral solution was added.

lide hydrochloride.

[0109] The compound of Example 113 was prepared in the same manner as in Example 1.

Example 113:

15

(R)-1-{4-[2-{(2-Hydroxy-2-phenylethyl)amino]ethyl]phenyl]-3-(2-pyridyl)urea dihydrochloride

[0110] Hereunder, physical and chemical properties of the compounds of the Referential Examples are given in Table 1 and those of the compounds of the Examples are given in Table 2.

[0111] The symbols in the Tables have the following meanings:

Rex.: Referential Example No.

Ex.: Example No.

DATA: Physico-chemical properties

NMR: Nucleomagnetic resonance spectrum (TMS internal standard; DMSO-d was used as a solvent unless otherwise specified)

mp: melting point

dec: decomposition

MS (m/z): mass spectrographic data (m/z)

Structure: structural formula

(1913) The compounds shown in Tables 4 and 5 (coghter with chemical structural formulae can be easily manufactured by almost the same method as mentioned in the above Examples or Manufacturing Methods or by such method to which some modifications known to the persons skilled in the after applied. In some cases, there are tautometic, geometric or optical isomers for the compounds mentioned in Tables 4 and 5, and the compounds of the present invention cover each of the isolated isomers and a matter thereor.

ning B is an optionally fused heteroaryl group selected from imidazothiazol, thioxothiazol, tetrahydrobenzohiazol, tetrahydroubnity, quinolyl, isoquinolyl, quinoldidinyl, quinoldidinyl, quinoxalinyl, cinnolinyl, benzimiazol, tetrahydroubnityl, benzolsoszocyl), benzolsozylo, benzolsozylo, benzolsozylo, benzolsozylo, benzolsozylo, benzolsozylo, benzolsozylo, benzolsozylo, pyrindyl, pyrindsziyl, pyraziyl, thiadazoly, timiazolyl, thiazolyl, pyrindyl, pyrindsziyl, pyrindyl, pyrindsziyl, pyraziyl, thiadazoly, timiazolyl, tetracylo, pyrindyl, pyrindyl, pyrindsziyl, pyrindyl, pyrindsziyl, pyrindyl, pyrind

X is a bond, a C_1 C_2 alkylene or C_2 C_2 alkerylene group which may be substituted with a hydroxy or C_1 C_2 alkyl group a carbony (group; σ - Nh; with the proviso that when X is a C_1 C_2 alkylene group optionally substituted with a C_1 C_2 alkyly group it may form a fing together with carbon actions of ring B:

A is methylene, ethylene, or -CH2O-;

R^{1a} and R^{1b} are the same or different and selected from H and C₁-C₆ alkyl groups; R² Is H or halogen: and

H^c is H or halogen; ar Z is a N or ≕CH-.

- A compound according to claim 1 wherein R², R^{1a} and R^{1b} are each a H, and Z is =CH-.
 - 3. A compound according to claim 1 which is an amide derivative of formula (ia) or a salt thereof:

wherein

ring B is a heteroaryl group as defined in claim 1;

X is a bond or a C₁-C₆ alkylene group; and

R is H or halogen or a C1-C6 alkyl, amino, benzyl or halogenobenzyl group.

A compound according to claim 1 selected from

(ii) - 4'[2-(2-hydroxy-2-phenylethylaminojethyl) 2-pyridne-carboxanilide, (ii)-2-(1-4-chlorobenzy)-1H-imida-2-hyd-4'[2-(1-hydroxy-2-phenylethylaminojethyla-catanilide, (ii)-2-(1-3-4-chlorobenzy)-1H-imida-2-hyd-4'[2-(1-hydroxy-2-phenylethylaminojethylacatanilide, (ii)-2-(2-aminotylacatanilide, (ii)-2-(1-aminojethylacatanilide, (ii)-2-(1-aminojethylacatanilide, (ii)-2-(1-aminojethylacatanilide, (ii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, (ii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, (ii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, (ii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, (ii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, (ii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, (ii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, (ii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylaminojethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(2-(1-hydroxy-2-phenylethylacatanilide, iii)-4-(1-hydroxy-2-phenylethylacatanilide, i

5. A pharmaceutical composition containing a compound according to any preceding claim.

 The use of a compound according to any of claims 1 to 4 for the preparation of a medicament for treating diabetes mellitus.

Patentansprüche

1. Amidderivat der Formel (I) oder ein Salz davon:

$$R^2 \xrightarrow{QH} R^{16} R^{16} R^{10}$$

wobe

10

15

25
